**IMPORTANT:** Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: West Davis Creek is a catalogued fish creek. During a survey in May we were able to walk the system for upper extent and identified two additional tributaries for nomination. Adult coho remains and coho fry were observed throughout the system to upper extents. The upper extent of these tributaries are adjacent to units that were previously harvested in the Johnston Creek sale. This system is located on private lands owned by Mental Health Trust Lands.
